## Conservation Stewardship Program Open for Applications

**STILLWATER, Okla., Nov. 10, 2016**—The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) is accepting applications for enrollment in the [Conservation Stewardship Program](#) (CSP), the nation's largest conservation program. Applications are available in [local service centers](#). NRCS offices will begin processing applications for the program on November 14, 2016, with sign-up running through February 3, 2017.

CSP is for producers who are already established conservation stewards, helping them to deliver multiple conservation benefits on working lands, including improved water and soil quality and enhanced wildlife habitat. Information about CSP, including national and state ranking questions and enhancement descriptions, is available at [www.nrcs.usda.gov/csp](http://www.nrcs.usda.gov/csp).

"This year, the Conservation Stewardship Program provides even more opportunities for conservation and greater flexibility at the local level to prioritize resource concerns and conservation approaches," said Gary O'Neill, NRCS State Conservationist for Oklahoma. "Customized CSP tools for Oklahoma will improve the customer experience during application evaluations."

Through CSP, agricultural producers and forest landowners earn payments for actively managing, maintaining and expanding conservation activities like cover crops, ecologically-based pest management, buffer strips and pollinator and beneficial insect habitat—all while maintaining active agriculture production on their land. CSP also encourages the adoption of cutting-edge technologies and new management techniques such as precision agriculture applications, on-site carbon storage and planting for high carbon sequestration rate and new soil amendments to improve water quality.

NRCS has made several updates to the program this year to help farmers and ranchers better evaluate their conservation options and the benefits to their operations and natural resources. New methods and software for evaluating applications will help producers see up front why they are or are not meeting stewardship thresholds, and allow them to pick practices and enhancements that work for their conservation objectives. These new tools also allow producers to see potential payment scenarios for conservation early in the process.

*-more-*

NRCS has addressed producer and stakeholder input requesting greater flexibility to address local resource concerns. Now, NRCS will more effectively utilize input from farmers, ranchers and partners in State Technical Committees and local workgroups to inform and expand conservation strategies under the program. Producers will be better prepared to apply because they will know these local ranking priorities and targeted resource concerns in advance.

Since 2009, working with as many as 500,000 farmers, ranchers and landowners to protect over 400 million acres nationwide, USDA has invested more than \$29 billion to help producers make conservation improvements, boosting soil and air quality, cleaning and conserving water and enhancing wildlife habitat.
